CHAPTER One

The Seed

A hillside childhood, a career in television, and a question that wouldn't let go

---

Shailesh Kandel Kshetri addressing a public forum.

Raised in a lower-middle-income family in the hills of Parbat, Nepal, Shailesh Kandel Kshetri grew up watching farming communities carry the weight of the country on their backs — and watching the country look away.

That early experience became a conviction: the media should do more than entertain. It should educate, inspire, and create lasting social change. He began his television career at twenty, eventually writing Michael Adhikari, Nepal's first feature film to address surrogacy, and creating The Poet Idol, the country's first poetry reality competition. He went on to contribute to major national productions — Himalaya Roadies (an MTV franchise), The Voice of Nepal, The Game Changer, and dozens of other popular shows — building a career as a creative force behind socially relevant content.

But even a flourishing career couldn't quiet the same observation from home: while celebrities filled the national screen, the people who fed the nation remained invisible. Farmers were background, not subject. Agriculture was scenery, not story.

> *Media professional, social activist, and climate advocate, he staked his life on one radical belief: that restoring dignity to farmers and power to the soil can mend a broken food system and a warming world.*

For seven years, Shailesh poured his savings, his career, and his time into an idea most people told him would fail — a reality competition that would put farmers and agriculture graduates at the center of the national conversation, not as a documentary backdrop but as the arena, the prize, and the plan for the planet's future, all at once. That idea became RAW: Revolutionary Agriculture War.

CHAPTER Two

What Is RAW

A format engineered to travel to every nation that has soil and a future to protect.

RAW (Revolutionary Agriculture War) is the world's first agriculture game reality show, establishing a new genre called “Agritainment.” It features two distinct contestant categories—professional farmers and agriculture graduates (minimum qualification Bachelor in Agriculture Science or equivalent) —who compete separately and then collaborate in mixed teams, ensuring fairness and mutual respect between practical wisdom and scientific knowledge.

It fuses high-stakes competitive tasks with real consequence — a plantation-based voting mechanism, live policy advocacy, school outreach, international competition — turning every episode into a battle of skill, innovation, and measurable real-world impact.

The show positions farmers as frontline heroes and agriculture as the backbone of human survival and shared prosperity. .

Two crises, one arena

Humanity stands at a crossroads defined by a surging population, vanishing farmland, and rising temperatures—a perfect storm that fragments our food systems and deepens the climate crisis. What has been missing is a single strategic tool that doesn't just raise awareness but rewires our collective consciousness from root-level mindsets to national policy. RAW is that missing piece. It fuses agriculture, entrepreneurship, and climate action into a movement that positions farmers as the frontline heroes of our survival, offering measurable solutions across every dimension of food security. This is not television for entertainment's sake; it is a holistic architect of shared prosperity designed to secure a livable planet and a purposeful life for generations to come.

Set of RAW - Revolutionary Agriculture War.

Contestants make entry onto the set, ready to take on the challenges.

jkjkjljCHAPTER Three

Two Kinds of Expertise

Farmers and graduates, competing apart and building together

RAW is built around two distinct contestant categories: professional farmers, and agriculture graduates holding a minimum of a Bachelor's degree in Agriculture Science.

They never compete against each other directly. Instead, each category is judged on its own terms and the two are brought together as teams — practical, land-earned wisdom paired with scientific training — because the show's core message is that neither is sufficient alone. What a farmer grows, and how it is grown, directly shapes the health of people, the planet, and the well-being of the whole community. Each side has to respect the other's role and work together, on camera, under pressure.

Season One Farmer contestants review their challenge briefing on set with Maha-Host Rajesh Hamal..

Season One Graduate contestants review their challenge briefing on set.

How the season narrows

— **Application & Shortlisting:** 1,642 applicants nationwide — 1,398 farmers and 244 graduates — from 77 districts.

— **First Cut:** narrowed to 100 contestants (70 farmers, 30 graduates), then to the Top 12 farmers and Top 12 graduates who open the season.

— **Top 12 Rounds:** farmers compete only against farmers, graduates only against graduates, before mixed farmer–graduate teams are formed — farmers choose their partners based on performance ranking.

— **Top 6 -The Farm Round:** from the Top 6, farmers return to their own farms with their graduate partner for on-site evaluation by subject-matter judges, narrowing the field to a Top 3 Farmer and a Top 3 Graduate line-up.

— **Top 3 - Campaign Round :**Real-world impact missions where contestants design and execute campaigns. These include student engagement campaigns, policy advocacy campaigns, competition on international land, social media outreach, and the signature plantation campaign (“One Tree, One Vote”), which directly ties audience voting to environmental action.

— **Grand Finale:** the finalists compete for two separate titles — a Farmer Champion and a Graduate Champion

CHAPTER Four

One Tree, One Vote

WORLD'S FIRST PLANTATION BASED VOTING SYSTEM

A traditional welcome ceremony on the RAW set.

RAW BOT — One Tree, One Vote replaces the ordinary machinery of reality-show voting with something that outlives the season: a verified tree, planted in the ground.

Instead of SMS codes, app taps, or online polls, supporters cast their vote by planting a perennial tree in a contestant's name. Each tree must have a minimum two-year lifespan and be planted in open ground — seasonal vegetables, herbs, and potted plants don't qualify, and contestants cannot vote for themselves or count trees planted on their own land.

How a tree becomes a vote

— **Individual voting:** a supporter plants a single tree, documents it with photo and video evidence, and submits the record through a designated form for verification.

— **Group voting:** a group plants a larger number of trees at once; the submission requires certification by a local government agriculture officer before any tree is counted.

Once verified, each tree counts as one official vote toward the RAW Climate Award. During Season One, the system generated 289,973 verified plantation votes in a single month — more than 60 percent of them fruit-bearing trees — with at least one international vote logged from Romania. Suman Bimali became the first-ever winner of a plantation-based voting system in reality television, taking the inaugural RAW Climate Award.

> *The system transforms democratic participation into measurable ecological restoration — turning an audience vote into carbon sequestration, biodiversity, and an addition to the national green economy.*

Beyond the vote count itself, the campaign is designed to encourage the long-term protection and nurturing of every tree planted, and to seed the plantation of millions more, well past the life of a single season.

CHAPTER Five

Season One at a Glance

Twenty-one episodes, from open casting call to grand finale

Season One ran 21 episodes across two production years — sixteen competition episodes, four campaign episodes, and one grand finale.

Host Rajesh Hamal briefs the cast on set.

EP	PHASE	WHAT HAPPENS
1	Top 12	Hunger: The Seed of Agriculture — 24 contestants open the season, split into two groups of 12.
2	Graduate Task	Cheetuwa Chaal (Leopard's Pace) — grain and disease identification, ploughing.
3	Farmer Task	Jal, Jameen ra Agni (Water, Land and Fire) — compost, Azolla, and biochar production.
4	Team Formation	Mauri Nach (Bee Dance) — farmers choose their graduate partners.
5	Graduate Task	Jungle — forest-item identification and presentation, Group B.
6	Farmer Task	Bajaar (Market) — zero-energy tomato storage, product-making, and pitching.
7–8	Battle for Top 6	Group A and Group B face collaborative identification and presentation rounds.
9	Top 6	Art and Agriculture — teams promote agriculture through performance and defense.
10	Wild Card	Three eliminated graduates return for a chance at re-entry.
11	Farm Round I	Farmers and partners are judged on-site on farm management and value addition.
12–14	Gharkhet	Farmer's Battle for Top 3 — on-farm evaluation, defense, and a decisive question.
15	Graduates	Graduates' Battle for Top 3 — goat farming, milk production, and health management.
16	Top 3	Top 3 farmers choose new graduate partners ahead of the finale.
17	Live Session	Contestants reflect on the journey with Maha-Host Rajesh Hamal.
18	Campaigns Begin	School outreach — Agricultural Revolution in Schools.
19	International	Contestants present before international judges in

		Madhubani, Bihar, India.
20	Policy	Gen Z Movement to Agri Movement — policy meetings and the book New Vision for Prosperity.
21	Grand Finale	Plantation-vote results, final tasks, and the crowning of two champions.

Farmer and agri-graduate contestants perform a Bee Dance in bee costumes, using gestures to demonstrate teamwork, coordination, and communication.

As one of the show's narrators, Bukhyacha adds energy, and personality while introducing challenges and sharing key

moments from the competition

Every episode brings a grand new set and location, where contestants battle through demanding agricultural challenges to secure their spot in the competition.

Culture, Adventure and Mind Games.

The top six farmer contestants compete in a farm-based task on their own farms Agri-graduate contestants assist them throughout the challenge while thematic judges observe and evaluate their performance.

Top 3 contestants (Farmer+Graduate) share their RAW journey and experiences live on stage, reflecting on their growth, envisioning their future, and discussing their farms and contributions to agriculture with 'Maha Host' Rajesh Hamal, 'Chief Judge' Dr. Yogendra Kumar Karki and 'Creator/Director' Shailesh Kandel Khsetri on Himalaya Television.

International Round - RAW's international round sent contestants across the border to Madhubani, Bihar, India, where agriculture experts, researchers, and contestants presented Nepal's agricultural status, research, and innovations before more than 27 representatives.

Policy Campaign – RAW finalists met with the then Agriculture Minister and handed over "Samriddhi Ka Lagi Naya Drishti" (New Vision for Prosperity) — a vision book draft outlining the present condition, possibilities, and way forward. Current Finance Minister Swarnim Wagle has also acknowledged the draft. Within one week, the book was presented to over 200 policymakers, with commitments secured for future policy consideration.

School Campaign – RAW finalists visited 103+ schools and engaged 15,000+ students, raising awareness about the potential, dignity, and importance of agriculture for human survival and prosperity.

The "One Tree, One Vote" plantation-based voting system mobilized over 15,000 participants from diverse professions, age groups, and walks of life. Within one month, more than 289,000 perennial trees were planted across multiple locations, with over 60% being fruit-bearing trees. Beyond plantation, protection strategies were also implemented to ensure the long-term survival and growth of the tree

RAW Season 1 Winners

In the left - RAW Climate Award Winner, Suman Bimali,In the MIddle - RAW Graduate Winner Samriddha Bhantana,In the right - RAW Farmer Winner, Laxman Kc

As a symbolic gesture of national unity, soil collected from all 77 districts of Nepal was applied as a tika to the winning contestant during the Grand Finale. The ritual honored the land and farmers across the country, representing the collective strength and prosperity of the nation rooted in its soil.

CHAPTER Six

On Set

The people who ran the two-year production

Production crew on location between takes.

No agriculture reality show has demanded a production timeline like this one: 730 days — two full years — of continuous, dedicated filming across farms, villages, government offices, schools, and one international location.

That complexity came from design, not accident. Ttwo contestant categories, on-farm evaluation at real working farms, live policy campaigns, school outreach, international filming, and a nationwide plantation-voting drive — all inside one coherent competition arc.

The people at the center

— **Rajesh Hamal, Host** — Nepal's superstar, credited on the show as "Maha-Host," anchored every episode and its live sessions with contestants.

— **Dr. Yogendra Kumar Karki, Chief Judge** — former Secretary of the Ministry of Agriculture and Livestock Development, brought decades of policy expertise and institutional credibility to the judging panel — reportedly the first time a government ex-secretary has served as a judge on a reality show.

— **Shailesh Kandel Kshetri** — creator, director, and chief executive producer, having spent seven years researching and building the format before a single episode was filmed.

In Episode 1, the production made an unusual commitment of its own: share commitment letters were handed to all 24 top contestants at no cost, with the organization envisioned to become farmer-owned once it goes public. After the season, Farmer Champion Laxman K.C. was named brand ambassador of Muktinath Krishi Company Limited — a public company, and, notably, not the celebrity or professional influencer a reality show would typically choose.

CHAPTER Seven

Firsts & Records

Fifty-two claims, and counting

The RAW production team has documented more than fifty-two potential world-record claims arising from the format, and has begun the process of submitting a formal selection of them for independent world-record review.

The claims are not pursued for their own sake. Each one is framed around a piece of the format that, the production argues, creates lasting value well beyond a single broadcast season — a new way to vote, a new way to judge, a new way to put a farmer in front of a policymaker. Eleven of the strongest candidates:

— **World's First Agriculture Game Reality Show —** The first reality competition built to capture the entire agricultural value chain — from soil to policy — inside a single game format.

— **World's First Plantation-Based Voting System —** RAW BOT — One Tree, One Vote replaced SMS and app-based voting with verified tree planting, at a scale no prior programme has attempted.

— **First Reality Show with Two Distinct Contestant Categories —** Farmers and agriculture graduates compete separately, then collaborate — a structure not used in any prior format.

— **First Reality Show with a Government Ex-Secretary as Judge —** Dr. Yogendra Kumar Karki's role as Chief Judge embedded policy-level authority into the show's core.

— **First Reality Show to Feature Policy Influence as a Formal, Scored Task —** Contestants' meetings with 200+ policymakers counted directly toward their competition scores.

— **First Reality Show to Feature a School Campaign as a Scored Task —** Outreach to 103+ schools and 15,000+ students was evaluated, not incidental.

— **Most Votes Ever Recorded in a Plantation-Based Voting System —** 289,973 verified trees planted and counted as votes in a single month.

— **First Reality Show to Receive an International Vote via Plantation —** A verified vote was logged from Romania.

— **First Reality Show with On-Farm Evaluation as a Regular Format —** Contestants were judged on their own working farms by subject-matter judges, not in a studio.

— **First Reality Show to Make a Farmer Contestant a Public-Company Brand Ambassador —** Farmer Champion Laxman K.C. became the face of Muktinath Krishi Company Limited.

— **Longest Production Timeline for an Agriculture Reality Show —** 730 days — two full years — of continuous production for a single season.

A full record-by-record submission, including supporting evidence and documentation, sits behind this summary and is available on request.

CHAPTER Eight

What's Next

Season One was the proof of concept

The Grand Finale, held in 2026, closed Season One — not the show. RAW was designed from the start as an ongoing franchise, with future seasons already in development inside Nepal and beyond it.

A franchise season is currently moving forward in the state of Bihar, India, and active conversations are underway with several other countries. The production frames RAW as a long-term strategic tool, not a one-off television event: a repeatable model for using entertainment and mass participation to address food security, climate resilience, and shared prosperity at scale — one designed to be replicated anywhere on Earth.

> *What has been missing is a single strategic tool that doesn't just raise awareness but rewires collective consciousness — from root-level mindsets to national policy. RAW is built to be that missing piece.*

Season Two is in development. The format's authenticity and originality have already drawn interest from other countries, and the team behind RAW is treating the blueprint as something the rest of the world can build on.

END OF SEASON ONE

Humanity stands at a crossroads defined by a surging population, vanishing farmland, and rising temperatures. RAW is one attempt at a missing piece — an entertainment format that positions farmers as the frontline heroes of our survival, and offers measurable answers across every dimension of food security.

This is not television for entertainment's sake.
